

Deploying the app:

Right click on the project in Eclipse -> Export -> WAR File

Save it as ROOT.war in hawkscodetarget

Run psftp.exe in the hawkscodetarget directory and also login using PuTTY:

<https://www.chiark.greenend.org.uk/~sgtatham/putty/latest.html>

PuTTY commands:

```
cd /usr/share/tomcat/webapps
```

```
sudo systemctl disable tomcat9.service
```

```
sudo rm -rf ROOT
```

```
sudo rm ROOT.war
```

psftp commands:

```
open hawkscodetarget.monmouth.edu
```

(Login using your ssh credentials)

```
cd /usr/share/tomcat/webapps
```

```
put ROOT.war
```

(wait for it to finish transferring)

PuTTY commands:

```
sudo systemctl restart tomcat9.service
```
