Before Deploying:
**Shortcut to comment in eclipse – Select all lines to comment/uncomment then Ctrl+/

Files to change before deploying (until we find a better way…) :
src/main/resources/**application.properties** – Comment out everything under DEPLOYMENT and then uncomment everything under TESTING

src/main/java/edu/monmouth/hawkscode/domain/**WebCompiler.java –** Inside webCompile(String fileName), comment out everything under DEPLOYMENT and uncomment the line under PRODUCTION

src/main/java/edu/monmouth/hawkscode/security/**Pac4jConfig.java** – Comment out everything except for the package, import, and class declaration.

src/main/java/edu/monmouth/hawkscode/security/**SecurityConfig.java –** Same thing as Pac4jConfig

src/main/java/edu/monmouth/hawkscode/web/**MainController.java** – Inside getUserID(), return userID instead of "s1110080"
